

## Continuity of Care

A key issue when delivering health services in remote areas is maintaining continuity between health care providers. In rural areas, Clinics on Wheels is the only solution designed to support the three key functions of medical care continuity.

- Maintains the highest quality of care to ensure patient safety.
- Fully integrates a HIPPA compliant electronic health record that is agnostic and can easily upload to any hospital system.
- Sustains connectivity to the hospital system, ensuring specialists can consult directly with the patients as needed, using state of the art telemedical systems.

This ensures that doctors and their patients maintain a clear and connected relationship regardless of how far a rural community is from the nearest healthcare provider. Clinics on Wheels allow for hospitals to appropriately capture the needs of a patient and maintain the chain of care throughout the patient care process.
